

Did you know?

Recycling is Beneficial to Your Lawn and You!

- ♻️ Grass clippings are mostly water anyway and will decompose very quickly and will NOT promote thatch.
- ♻️ Grass clippings are too valuable to waste! They contain about 4% nitrogen so returning them to the soil will supply a part of your lawn's fertilizer needs.
- ♻️ It will take you a lot less time to mow your lawn!
- ♻️ You will use fewer plastic trash bags.
- ♻️ Recycled grass clippings will help your lawn retain moisture reducing the need to water your lawn.
